BUSINESS DATA ANALYST

ABOUT US

We are a global company applying our successful model of landscape restoration to contribute to three of the world's most critical environmental problems: the need for effective solutions to mitigate global climate change; holistic restoration of the world's most degraded landscapes; and a growing population that requires sustainable alternatives for consumer products and markets that still contribute to deforestation and deforestation driven emissions. We have spent the last decade building the framework for bamboo to be a solution to achieve this through sustainable bamboo farms in Nicaragua, South Africa, Ghana and the Philippines.

We are looking for a dynamic individual to work with our corporate and in-country teams to transform data into target-driven visual dashboards, helping to improve decision making, operational and financial efficiency and maximize our project's positive impacts. The Business Data Analyst will be responsible for designing, developing and implementing a dashboard system, including databases and streamlining data sources, in order to present operational, financial and impact performance, ensuring progress towards our targets across a diverse set of countries and project types.

Location: Nairobi, Kenya, or Remote

RESPONSIBILITIES

- Create and maintain rich interactive visualizations through data interpretation and analysis, integrating various reporting components from multiple data sources across all countries of operation and including predictive analysis.
- Develop and maintain databases by acquiring data from primary and secondary sources and build scripts that will make our data evaluation process more flexible or scalable across data sets.
- Improve pre-existing spreadsheets and data collection systems, such as survey tools, and automate manual data reporting tasks to improve efficiency and reduce errors.
- Work with finance, operations and impact teams to understand and maintain focus on analytical needs, including identifying critical metrics and KPIs and keeping dashboards updated so actionable insights are constantly available to decision-makers.
- Identify opportunities for process improvements, recommend system modifications, and develop policies for data management.

QUALIFICATIONS

- Bachelor's or Post Graduate Degree in Computer Sciences, Business Administration or a related field.
- 5+ years of work experience as a data analyst with proven analytic skills, including database creation & management, data analysis, and visualization.
- Experience with the creation of dashboards or other data visualizations within analytics platforms like DOMO, iDashboards or other similar BI tools.
- Attention to detail with an analytical mind and inclination for problem-solving.
- Ability to digest datasets, visualize takeaways and communicate results using visual tools.

- High sense of urgency and ownership with ability to effectively prioritize and execute tasks in a high-growth environment
- Fluent in English with strong verbal and written communication skills.

WHAT WE OFFER

We offer a competitive remuneration package, growth opportunities and a platform from which to do exciting and meaningful work with an ambitious and passionate team in a vibrant global company that is working towards driving sustainable change.

TO APPLY

Interested candidates should email a cover letter expressing their interest in the position and how their background meets the requirements of the role as well as a CV to Samantha Wilde at swilde@ecoplanetbamboo.com. Candidates will be reviewed on a rolling basis until the position is filled.
